

SUVAM THAPA

Bachelor in Information Management · Final Year, Tribhuvan University

Bhaktapur, Nepal · +977 9763494775 · 88.suvamthapa.88@gmail.com · github.com/Suvam-Thapa · suvam-thapa.github.io/Portfolio

OBJECTIVE

Final-year BIM student seeking an IT internship. Comfortable across the stack, with a particular interest in backend and systems-level work. Built and shipped a full-stack web application, automated Linux system administration with shell scripting, and currently learning Rust. Looking to bring hands-on project experience and a fast learning curve to a real engineering team.

EDUCATION

Bachelor in Information Management (BIM)2023 – 2027

Bhaktapur Multiple Campus, Tribhuvan University · 8th Semester (Final Year)

Relevant coursework: Data Structures & Algorithms, Operating Systems, Artificial Intelligence, Information Security, Web Technology I & II

TECHNICAL SKILLS

- Languages: Python, Java, C, JavaScript / TypeScript, SQL;
- Currently learning Rust (built a Cargo project, configured a toolchain with the mold linker, clang, and sccache)
- Web & Backend: React, Vite, Supabase (PostgreSQL, Auth, Row-Level Security, Storage), REST APIs
- Security & Cryptography: Classical and modern cipher implementation (Caesar, Playfair, Hill, Vigenère, RSA, Diffie-Hellman); AES / DES / SHA-256
- AI & Algorithms: Search algorithms (BFS, DFS, A*, Uniform Cost Search, Hill Climbing), Naïve Bayes classifier, perceptron from scratch (NumPy), NLP tokenisation (NLTK), Prolog-based logic systems
- Tools & Systems: Git / GitHub, Linux (Arch Linux, custom dwm window manager), shell scripting, Vim / Emacs

PROJECTS

SkillRoad · React · TypeScript · Vite · Supabase · Vercel

A full-stack web application for tracking personal progress across learning roadmaps. Implemented user authentication, a PostgreSQL database with Row-Level Security policies, and file storage for profile pictures using Supabase. Deployed to production on Vercel with client-side routing configured for SPA navigation.

Arch Linux Install Automation (arch_install) · Shell scripting · 29 commits · 2 GitHub stars

Wrote and maintained shell scripts to fully automate an Arch Linux installation and post-install system configuration, including dotfiles and environment setup. Iterated across 29 commits to improve reliability and configurability of the install process.

AI & Algorithms Coursework · Python · NumPy · scikit-learn · NLTK · Prolog

Implemented classic search algorithms (BFS, DFS, A*, Uniform Cost Search, Hill Climbing) for graph and state-space problems. Built a Naïve Bayes classifier on the Iris dataset and a single-layer perceptron from scratch using NumPy. Also implemented NLP tokenisation with NLTK and a Prolog-based family-tree inference system using pyswip.

Data Structures & Algorithms Coursework · C · Java

Implemented core data structures from scratch — linked lists, stacks, and queues — along with BFS, DFS, sorting algorithms (bubble, merge, quick), and binary / linear search.
